

## Rebuilding lives and working for broad-scale solutions.

For more than four decades, TASC, Inc. has advocated for individuals and families affected by substance use and mental health conditions. We provide direct services, policy solutions, and consulting in order to give people and communities the tools they need to achieve positive and lasting change.

Across Illinois and nationally, TASC applies our expertise in individualized care and broad-scale solutions to promote public health, examine the impact of public policies, and encourage initiatives that safely divert people out of the justice system and into care in the community. Through these and other strategies, we help build a safer, more just, and healthier society.

### DIRECT SERVICES

Our work often begins in places that see a prevalence of people with chronic health conditions, such as jails, courts, and prisons. We reach rural, urban, and suburban communities throughout Illinois, and partner with other service providers statewide to ensure that our clients receive the care that is right for them.

TASC's direct services include screening, assessments, client advocacy, service planning, outpatient and intensive outpatient treatment for substance use disorders, care coordination, case management, and related efforts to support health, wellness, and sustained recovery.

Our work, and our results, are centered in the community: improved health outcomes, strengthened families, reduced recidivism, and eased burdens on public systems.

#### JUSTICE PROGRAMS

TASC strives to prevent unnecessary and expensive incarceration by stopping cycles of substance use and crime, and by helping individuals achieve health and recovery.

#### YOUTH AND FAMILY PROGRAMS

TASC builds strength and resiliency for youth, families, and communities through programs that connect people to services and offer guidance toward positive, safe, and healthy behavior.

#### TREATMENT AND RECOVERY SUPPORT

TASC offers outpatient and intensive outpatient treatment for substance use disorders, as well as co-occurring mental health conditions. Our clinical services address unique challenges faced by individuals who have been involved in justice or child welfare systems.

#### SCREENING AND ASSESSMENT

TASC partners with justice, corrections, and health systems by offering brief screenings and assessments to determine whether individuals may need substance use or mental health treatment.

### POLICY AND CONSULTING SOLUTIONS

TASC's policy and consulting solutions are grounded in science, data, and our direct service work. Together, our practical experience serving tens of thousands of Illinoisans each year, and our partnerships with leading national researchers, justice experts, and behavioral health organizations, inform the consulting and training services we bring to counties, states, and jurisdictions across the United States and internationally.
